

## FLIP-ABILITY!

The F Series terminal is one of United Tote's most popular systems due to its "flip-ability" and compact size.

Depending on staffing and patron level, facility managers can choose to flip the terminals between teller and self-service modes of operation, or use them for full-time, self-service operation - a decision that can lead to increased handle.

The F Series runs on the Microsoft® Windows® operating system and utilizes United Tote's innovative EnterBet™ wagering interface. All modules of the terminal (CPU, printer, reader, customer display, keyboard, etc.) are located within the compact terminal and readily accessible. Also, peripherals are hot-swappable and self-initializing, so repairs are fast and easy.

Designed by United Tote engineers, the F Series terminal supports the unique operational needs and service demands of racetracks and off-track betting facilities, while incorporating point-of-sale industry practices in ergonomics and customer service.
